## **Event Sourcing**

jOpenSpace 2016

**Event Sourcing is** 

a way of persisting

your application's state

In traditional systems

we persist the current state

of an object

Date	Balance
01.09.2016	50 000
05.09.2016	38 000
10.09.2016	88 000
15.09.2016	86 000
25.09.2016	85 000

# In Event Sourced systems we persist all changes that lead to the current state of an object

Every change is an event

## **Event** is something that happened in the past and has a business meaning

Event is immutable

Events are persisted

in event streams

## is a time ordered sequence of events in time

Event stream

Conceptually

it's append only

# Object state is restored by replaying the entire stream of events

Date	Description	Debit	Credit
01.09.2016	Account opened		50 000
05.09.2016	Display (Alza)	12 000	
10.09.2016	Salary		50 000
15.09.2016	Dinner (Café Imperial)	2 000	
25.09.2016	Food (Tesco)	1 000	

## **Benefits**

Additional business value

Integration with other systems

## Flexibility

## Perfect Audit log

## Debugging

## Testing

## Concerns

### Performance

## Versioning

## Querying

### Don't use it in...

## Simple domains

## Domains where historical information has no business value
